

PRESS RELEASE

January, 2010

Cable Company is delighted with Summit Matsu Chilling Systems

Summit Matsu Chilling Systems (Summit Matsu) was selected to supply Key Tubing and Electrical Industries (KTEI), a leading supplier of custom manufactured copper tubing with the chiller used in their extrusion process for cable manufacturing.

KTEI manufactures electrical cables, wiring harnesses copper and aluminium tubing and heater wires for both the white goods industries and healthcare in both the Australian and international markets. They were originally established in 1945, however the current owners have been running the company since 1990 over which time they have gained a wealth of inimitable experience and knowledge in the industry. KTEI enables customers to specify their cable requirements and KTEI then converts these requirements into working prototypes. The operations at KTEI are accredited to ISO9001:2008 and also employ the use of Lean Manufacturing and 6 Sigma which ensures quality, cost and service requirements are met.

A Summit Matsu chiller was used by KTEI for the cooling during the extrusion process for cable manufacture. So far KTEI has described the chillers performance since implementation as reliable and satisfactory with its role in the extrusion process.

Corey Smart who looks after the chiller in a maintenance position talked about the chiller at KTEI. He said "The unit seems very robust and reliable. Compared to units I have seen from Asia they are well designed reliable and offer good technical support."
