CHILLERS FOR INDUSTRY

21 February 2006

New Propylene Glycol / Ethylene Glycol

Australian water chiller manufacturer Matsu Chilling Systems has released its own brand of propylene glycol and ethylene glycol to complement its 2006 range of industrial water chillers and glycol chillers.

Matsu branded propylene glycol and ethylene glycol are all now available from Matsu Chilling Systems in both small and large quantities by overnight delivery to anywhere in Australia.

Glycol is used as an antifreeze in low temperature chiller applications. Propylene Glycol (USP Grade) is considered non-toxic and used specifically in the food industry. Ethylene glycol can be used in almost any other industry as an antifreeze.

After many customer requests Matsu Chilling Systems have provided propylene glycol and ethylene glycol to the Australian market in smaller quantities that previously available. Most suppliers only delivery in 200L containers however Matsu Chilling Systems supplies in quantities as small as 10 litres.

This complements the National Chiller Service and National Chiller Maintenance plans now available from Matsu Chilling Systems.
