PROCESS CHILLERS FOR THE MINING INDUSTRY

2005 process water chiller for mine shaft cooling

Australian manufacturing and engineering company Matsu Chilling Systems (www.matsu.com.au) has announced the release of the new 2005 range of air cooled process water chillers specific for regulating shaft temperatures in the mining industry.

Improvements to the water chiller system include full system diagnostic feedback by way of plc control, and the ability to remotely reset control stages within the chiller. This can be done remotely by dialup or by SMS to a mobile phone. The operating temperature of the chiller can even be changed by SMS.

Improvements have been made to the 2005 chiller range specifically for the harsh environments, high operating temperatures and remote locations of the mining industry. Improvements include all weather impact resistant chiller cabinet and re-sizing of essential components like condensers and pumps to cope with excessive heat, humidity, wet, or cold. There are also auto shut off safety switches on every chiller component. "Machines manufactured in Europe, the USA, or Asia cannot guarantee this durability." said Matsu Chilling Systems Managing Director Daniel Rollston.

Other improvements to the 2005 series of Australian water chillers include easier panel access, electrical cabinet access, and full and easy access to all essential chiller operating components such as compressors, fans, and pumps for easy service or replacement.

Matsu Chilling Systems manufacture process water chillers in Australia, for Australia and the Region, exporting world-wide. Other industries served include plastics, oil & petroleum refineries, power stations, precision engineering, lasers, baking and food manufacturing.
