CHILLERS FOR INDUSTRY

06 Sept 2006

Process Refrigeration and industrial water chiller company Matsu Chilling Systems has announced relocation to new, larger premises in Alexandria, Sydney.

The increased factory floor area will lead to greater efficiencies in manufacturing and allow an increase in manufacturing staff, reducing time to market and giving greater reliability in delivery time said General Manager Daniel Rollston.

The increased store area will also allow for stock piling of parts for best selling chiller models in the lead up to Summer, which will translate to greater reliability and short delivery times as we are less reliant on the lead times of our refrigeration suppliers.

Another benefit of the greater warehouse space is that we have been able to increase our stockpile of rental chillers for emergency breakdowns. In the lead up to summer chiller rentals will play an increasing role in our business.

Water chiller run testing facilities have also been increased as part of the factory upgrade. Once again this translates to greater flexibility in delivery times because several chillers can now be run tested at once.

Matsu Chilling Systems manufacture industrial water chillers, scientific chillers, fan coil units, and process cooling machinery for all types of applications. Further details can be found at:
