

PRESS RELEASE

March 2007

Formerly Summit Water Chillers Australia, Matsu Chilling Systems has re-designed its range of small lab water chillers for under counter use.

New features include castor wheels, lower profile shorter frame for wheeling chillers under the counter, visual inspection point for easy manual refill and level indication, and corrosion proofing of condenser fins for harsh environments.

Standard chiller features include stainless steel tank, process pump and easy to operate digital display.

“This small chiller range has some great features which should make it even easier for our customers to install and operate the chillers – they are just plug and play” said General Manager Daniel Rollston.

Matsu Chilling Systems manufacture and distribute water chillers Australia wide for air conditioning, industrial processes, food processing, petrochemical applications, scientific uses, and process cooling machinery for all types of applications.

Matsu Chilling Systems also commission and service from 2kW to 1200kW water chillers Australia wide.
