Summit Matsu Unsung Heroes for Jet Rescue Ride at Sea World

Summit Matsu Chilling Systems has provided a reliable cooling system to yet another satisfied customer. The Gold Coast's Sea World is a marine mammal park that has been expanding since 1972 to include a range of marine life, rides and shows. The park operates all year and has recently acquired a new, exciting ride called the Jet Rescue which uses one of Summit Matsu Chilling System's industrial chillers.

The Jet Rescue Ride is made up of a chain of real life replicas of Jet Skis which allows thrill seekers to experience the excitement of riding a Jet Ski in a safe environment which still enjoying the adrenaline rush of riding a Jet Ski. The ride operates along a track at 70km/h, zooming along a looping track which takes riders into a blow hole cave where they are sent on a mission to save a sea lion. The ride is a key feature in Sea World's conservation and marine awareness program which aims to raise the public profile of conservation issues in Australia.

Behind the scenes of this exciting ride is Summit Matsu Chilling Systems who provided the air cooled chiller which works to keep the ride's hydraulic oil cool. The company has been manufacturing industrial chillers for Australian industry for over forty five years, priding themselves on designing and building the most reliable chillers on the market. The need for reliable equipment at the Sea World site is imperative. When asked about the consequences of the chiller breaking down, a Sea World representative laughed, stating simply "It wouldn't run". The site itself presents specific challenges to the durability of any chiller equipment, a challenge that Summit Matsu Chilling Systems overcame thanks to their continued commitment to research and development and experience in designing cooling solutions for difficult applications. The corrosive environment of Sea World's location means that machinery is susceptible to oxidization and deterioration at a rapid rate.

Summit Matsu Chilling Systems is an Australian manufacturer based in Alexandria, Sydney. Having domestically based engineers was a definite advantage for Sea World. Having access to the engineers who designed and built the chiller meant that when problems did arise, arriving at a solution was a far faster and more convenient process.

More information on similar applications and case studies can be found online at www.matsu.com.au. For product enquiries please call 1300 CHILLERS (1300 244 553) or +61 2 9698 4666.
